

Streaming PACS

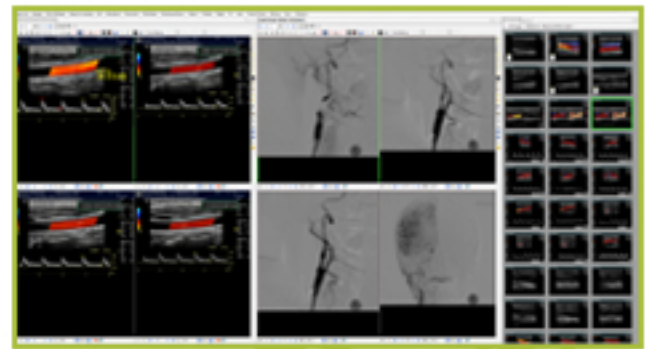

Streaming PACS

PACS (Picture Archiving and Communication System) is no more an essential part of the radiology department workflow only; PACS has become a crucial tool for communicating diagnostic results across healthcare systems and evolved to be part of other specialties as well.

Streaming **PACS** is a vendor neutral specialty based PACS by Medstreaming designed to provide unprecedented centralized image review, processing and management platform that serve all your needs across a wide variety of specialties.

Cardiology

Vascular

OB/GYN

Streaming PACS

Streaming **PACS** provides a portal that gives reading and referral physicians the flexibility to access and read their patients' studies remotely from anywhere at any time. The portal is a web-based innovative feature with improved technology that handles your images with care to provide fast access to the patients' studies including images and loops while maintaining the patient data confidentiality and security. Streaming **PACS's** Portal is a zero footprint viewer that supports most of the popular web browsers.
